

Quick Quiz 1 – Name: _____

Write a complete program that contains a variable named `testScore`, which is used to store a score for a test. The program must prompt the user to enter his or her score, then store that value in the variable `testScore`. The program must then output the contents of the variable. *Your program must also adhere to the Company Rules regarding structure.*

Quick Quiz 2 – Name: _____

Write a complete program that prompts the user to enter his/her name and age, and then display both values to the screen. Be sure to declare the variables as the **most appropriate** type.
